

7. Activities in the Green Combs

One of the most important aspects of the Green Combs is to provide them with activities that engage the participants and add value to the local ecosystem in which they are integrated.

Types of activities carried out in the Green Combs:

- There are two main types of activities in the Green Combs. On the one hand, internal activities and on the other hand activities carried out with external participants.

Internal activities:

- Internal activities: These are the activities that are performed to maintain the structure and functioning of the Green Combs. These activities include management, administration and communication.

Communication:

- Communication. Among the internal activities, communication activities stand out, as they contribute to raising awareness of the Green Combs' activities. Communication can be both offline and online.

Activities with external participants:

- Activities involving participants are fundamental to the Green Combs and are at their core. There are two types of activities: In door activities and Outdoor activities.

Indoor activities:

- Sustainability-related conferences, brainstorming activities, awareness-raising workshops or the creation of working groups have been identified as activities to be carried out in the Green Comb. The following activities can be highlighted.

Icebreaker activities:

- The main objective of this type of activity is to get to know each other among the different participants in the group with which we are going to start any type of activity.

Creative activities and workshops:

- The idea is to present different creative activities linking creativity, environment and culture to deal with transversal aspects with the participants.

Reuse and recycling workshops:

- The objective of this activity is, above all, to raise awareness among participants in relation to the reuse and recycling of various materials, such as furniture, clothing or other types of everyday objects that can be used in a new way.

Activities and workshops on how to sort their waste and recycle materials such as paper, plastic.

- Activities and workshops in relation to the classification of materials and their recycling processes.

Workshops to raise awareness of the environmental impact of daily behaviours.

- The objective of this activity is to help raise awareness of the impact that our behaviours have on the environment.

Best practices workshops:

- Other activities that have been proposed as essential within the Green Combs have been the best practices workshops on different topics that can be changed periodically (monthly, quarterly) depending on the resources.

Activities that are related to lifestyles and one's own personal image.

This type of activity would be more developed with the behaviour of the participants and would contribute to creating a positive and fashionable image of leading healthy lifestyles and developing environmentally friendly behaviours.

Sorting and donating clothes

Another of the activities proposed within the Green Combs is to become a clothing collection site, where these clothes can be classified and reused.

Outdoor activities

Green Comb activities do not have to be subscribed solely and exclusively to a closed space, but many activities can be carried out outside the Hub spaces. In this line, different types of activities will be developed outdoors.

Creating of small vegetable garden

Each plant is "assigned" or "adopted" by a student so that they become aware of the necessary care and what and how to take care of it. The purpose of these activities is to work on responsibility and the need to take care of our environment.

Creating a vegetable garden together

This activity constitutes a variation of the previous activity, although the objective would be to work together so that transversal skills, such as teamwork, are also worked on.

Activities of recycling and art.

A rubbish collection activity on beaches and rivers to show people how much rubbish ends up in nature, and then use some of it to create art.

Composting programs.

Many of the outdoor activities are related to plant care or garden creation.

Carrying out composting activities linked to plant care is one of these activities that seek to raise awareness about another use of waste and teach participants how to use it.
